Education

Information Systems, Uni-Facef
January 2017 — December 2020

Employment History

Systems Development Analyst, Cedro Technologies
February 2022 — Present
Languages: (Golang, Python, C#, Vue).
Databases: (Redis, PostgreSQL, ArangoDB, MongoDB).
Containers: (Docker, Kubernetes).
Cloud Computing: (GCP).

- Check implementations that use firebase authentication (SSO).
- Using Google Cloud Platform for capturing logs.
- Working in several features of the chatbot department.
- Working with pub/sub utilizing RabbitMQ.
- Development of API's Golang using gRPC.
- Working on several scripts with Python and Golang, fixing their flows.
- Utilizing Lens to check Pods on Kubernetes and Telepresence to organize the ambient.
- Improved our CI/CD utilizing bitbucket pipelines.
- Working with Agile Techniques.

Software Development Engineer, Quero 2 Pay
February 2021 — February 2022
Languages: (Golang, NodeJs, Python, React Native, React).
Databases: (Redis, MySql, SQLServer).
Container: (Docker).
Cloud Computing: (AWS).

- Development of innovative ideas and MVP developments to test market acceptance of possible new products.
- Development of conciliation, register of receivables, and liquidation flow utilizing Golang and NodeJs.
- Working in several features of the financial department.
- Development of workers consuming AWS SQS and API.
- Working with DevOps, creating AWS SQS, AWS EC2, AWS Lambda, AWS ECR, AWS IAM, AWS ECS, CodePipeline, AWS S3, Route 53, and many services inside AWS.

- Improved our CI/CD maintenance with standard reusable workflows using env vars for specific configurations using GitLab CI/CD and Amazon S3 with Amazon CodePipeline and other resources.
- Mentored junior developers
- Improved our test coverage using better test abstractions with Golang.
- Working with Agile Techniques.

Full-Stack Developer, Codebit
February 2019 — February 2021
Languages: (NodeJs, React Native, React).
Databases: (Realm, MySql, MongoDB).

- Coordination of mobile projects being responsible for monitoring and mentoring interns and new co-workers in mobile development.
- Production of two mobile applications on-demand for our customers.
- Implement mobile project structures, such as initial templates for new projects.
- Automating processes such as version generation using CodePush, and Jenkins, creating APIs in NodeJs for automated publication in CRM when application version is generated.
- Guarantee of standard commits using Git Hooks (Husky) and Git-CZ, code standardization using ESLint.
- Production of a platform and CRM using NodeJS, Handlebars, and Sequelize.

Mobile Developer, MazzaFC Tecnologia da Informação
March 2018 — January 2019
Languages: (NodeJs, React Native, React).
Databases: (Realm, MySql).

- Production of two mobile applications with online and offline options to use the application using Realm database and other good libs of React Native to implement this tool and more.
- Production of a CMS on-demand for our customers using React and NodeJs.
- Guarantee of commits using Git Hooks, Git-CZ, and code standardization using ESLint.
- I talked about ES6, ES7, ES8, and ES9, their functions and resources, and how they can be used for good practices when working with JavaScript.
- Generation of automated versions using CodePush.

Full-stack Developer, Irroba E-commerce
February 2017 — February 2018
Languages: (PHP, jQuery, JavaScript).
Database: (MySql).

- Customer service for making layouts on-demand, requiring the use of CSS and its selectors in jQuery and HTML.
- Implementations of configurations for the e-commerce platform (PHP).
- It was my first experience with PHP, and I adapted well to the good explanations of co-workers. Still, I was not interested in going deeper in my studies because I discovered mobile development.

Front-End Developer, SMN Tecnologia da Informação
April 2017 — February 2017
Language: (Angular Js).

- Production of a CMS on-demand for our customers.
- Use of specific git-flow for our use cases.
- It was my first contact with programming languages and development.
- I had two months in which I only produced programming logic with JavaScript, creating games like Snake, Tic Tac Toe, and slideshow.
- After two months of studying the logic of programming, Angular, and JavaScript, I started working on projects that already existed in the company.
